INFOSYS SPRINGBOARD VIRTUAL INTERNSHIP

MODULE-2

NAME: Abhilash kumar jha

PROJECT NAME: HotelRevAI AI Driven Revenue Analysis for Hotels_Batch -13

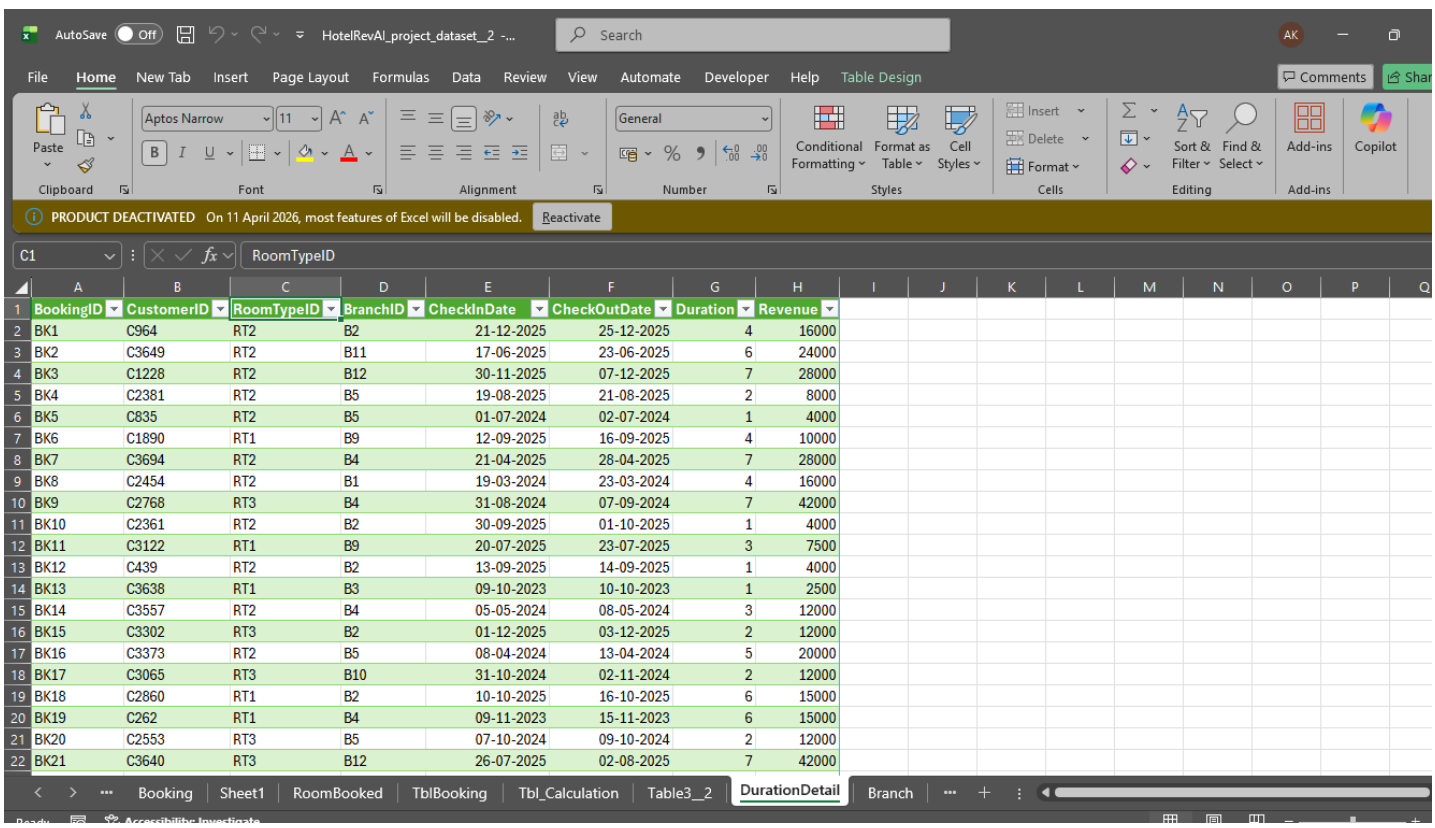
1. Objective

The goal of this module is to break down summary booking data into a daily level granular format. This allows for the analysis of daily revenue trends, occupancy rates per specific date, and the calculation of daily KPIs.

2. Creation of Excel Tables:

2.1 Creation of Duration_Details Table:

The **Bookings table** containing all booking details was used as the base dataset. From this table, selected columns such as BookingID, DateID, RoomID, CustomerID, CheckInDate, CheckOutDate, NightsStayed, and Total Price were extracted to create a new table named **Duration_Details**.



BookingID	CustomerID	RoomTypeID	BranchID	CheckInDate	CheckOutDate	Duration	Revenue
BK1	C964	RT2	B2	21-12-2025	25-12-2025	4	16000
BK2	C3649	RT2	B11	17-06-2025	23-06-2025	6	24000
BK3	C1228	RT2	B12	30-11-2025	07-12-2025	7	28000
BK4	C2381	RT2	B5	19-08-2025	21-08-2025	2	8000
BK5	C835	RT2	B5	01-07-2024	02-07-2024	1	4000
BK6	C1890	RT1	B9	12-09-2025	16-09-2025	4	10000
BK7	C3694	RT2	B4	21-04-2025	28-04-2025	7	28000
BK8	C2454	RT2	B1	19-03-2024	23-03-2024	4	16000
BK9	C2768	RT3	B4	31-08-2024	07-09-2024	7	42000
BK10	C2361	RT2	B2	30-09-2025	01-10-2025	1	4000
BK11	C3122	RT1	B9	20-07-2025	23-07-2025	3	7500
BK12	C439	RT2	B2	13-09-2025	14-09-2025	1	4000
BK13	C3638	RT1	B3	09-10-2023	10-10-2023	1	2500
BK14	C3557	RT2	B4	05-05-2024	08-05-2024	3	12000
BK15	C3302	RT3	B2	01-12-2025	03-12-2025	2	12000
BK16	C3373	RT2	B5	08-04-2024	13-04-2024	5	20000
BK17	C3065	RT3	B10	31-10-2024	02-11-2024	2	12000
BK18	C2860	RT1	B2	10-10-2025	16-10-2025	6	15000
BK19	C262	RT1	B4	09-11-2023	15-11-2023	6	15000
BK20	C2553	RT3	B5	07-10-2024	09-10-2024	2	12000
BK21	C3640	RT3	B12	26-07-2025	02-08-2025	7	42000

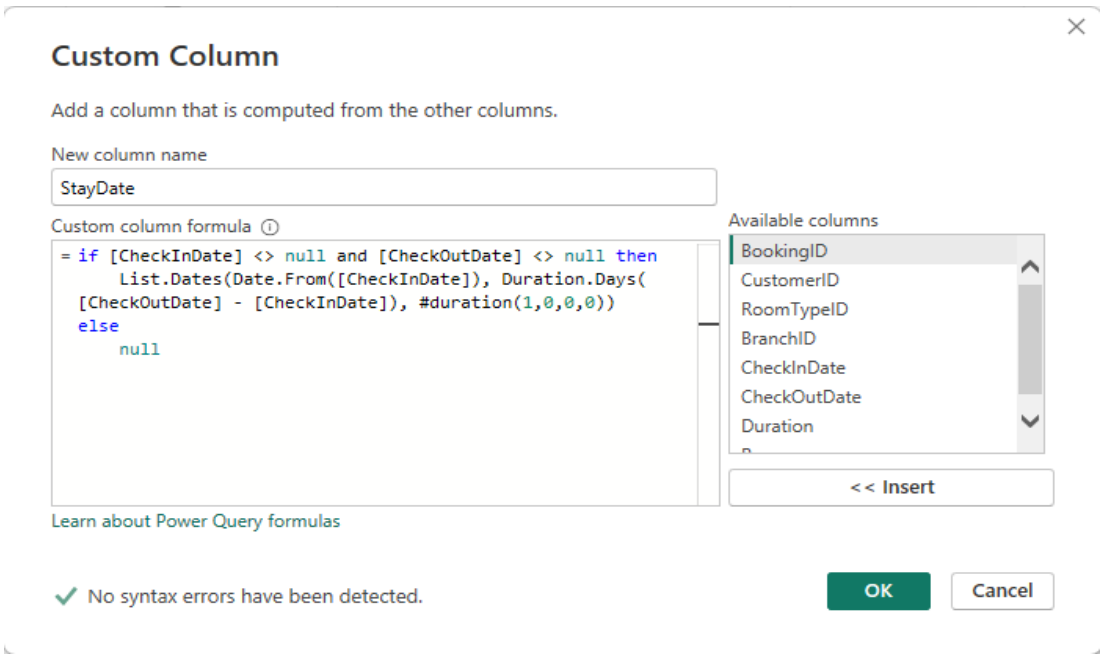
The table was selected and loaded into **Power Query** using **Data Tab → Get & Transform Data → From Table/Range** to begin data transformation.

2.1.1 Add Custom Column

In Power Query Editor, a custom column named StayDate was created using Add Column → Custom Column. The M-code formula generates a list of dates between the check-in and check-out dates for each booking

Formula:

```
if [CheckInDate] <> null and [CheckOutDate] <> null then
    List.Dates(Date.From([CheckInDate]), Duration.Days([CheckOutDate] - [CheckInDate]), #duration(1,0,0,0))
else
    null
```

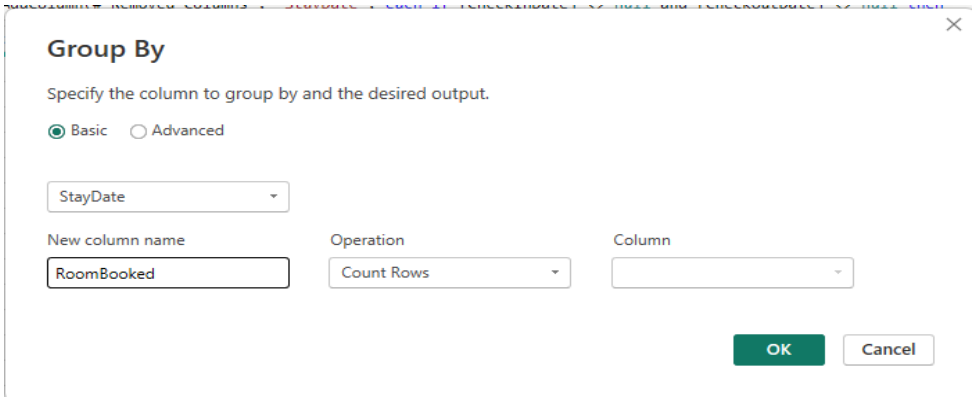


2.1.2 Expand Rows:

- Click the Expand arrows (two diverging arrows) next to the new StayDate column header.
- Select "Expand to New Rows".
- *Result:* Each booking is now duplicated for every day the guest stayed.

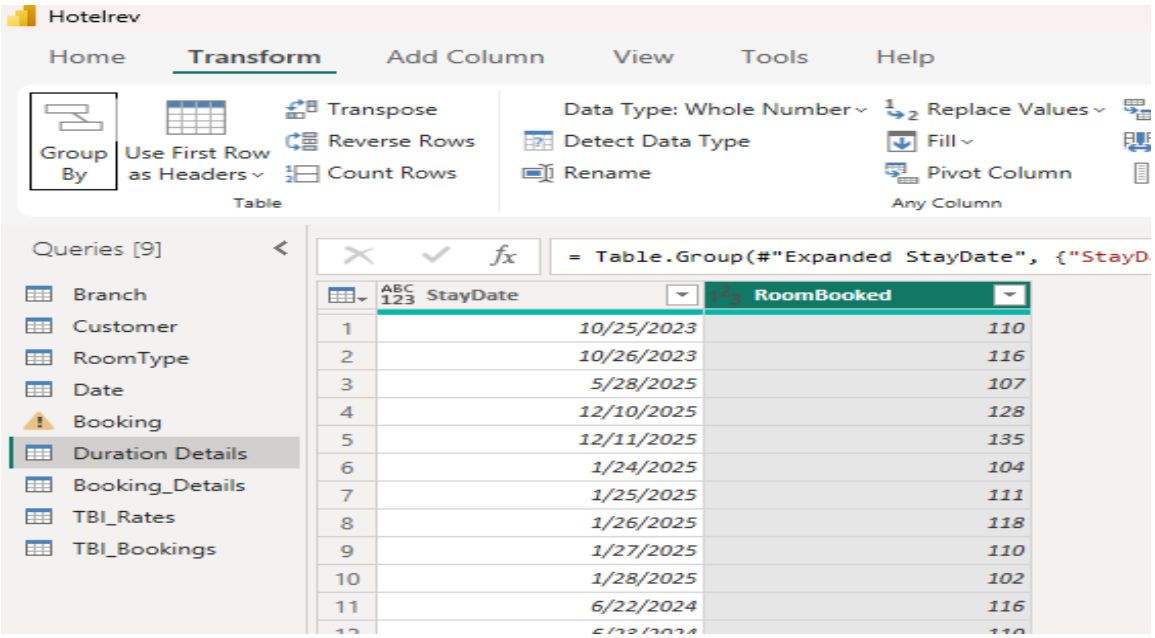
2.1.3 Group By (Occupancy Count):

In the Transform tab, the Group By option was used to group the data by StayDate. A new column named Room Booked was created by counting the number of rows for each date.



2.1.4 Load Data:

The transformed data was loaded into a new worksheet using Home → Close & Load To, and the sheet was renamed as Rooms Booked.



2.2 Creating "Yearly and Monthly Date" (Pivot Table)

This sheet is used for a quick summary view of room bookings aggregated by time.

1. A PivotTable was inserted from the **Rooms Booked** table.
2. Years, Months, and StayDate were added to the **Rows** section.
3. Room Booked was added to the **Values** section with Sum aggregation.
4. The worksheet was renamed **Yearly and Monthly Date**.

Row Labels	Sum of RoomBooked
2023	13887
Qtr3	2930
Qtr4	10957
2024	42412
Qtr1	10465
Qtr2	10735
Qtr3	10708
Qtr4	10504
2025	42152
Qtr1	10035
Qtr2	10720
Qtr3	10619
Qtr4	10778
2026	5753
Qtr1	5753
Grand Total	104204

2.3 Creating "Master Data" Table

1. Create Table: Create a new sheet named "Master Data".
2. Columns & Formulas:

    - Month: Enter Month Starts from 01-Jan-2022 to 31-Dec-2024.
    - Day Count =DAY(EOMONTH(A2,0))
    - Room Available =B2*150
    - Rooms Sold: Take Data from Yearly and Monthly Date table.
    - Occupancy Rate =(D2/C2)*100

MonthStart	Month	DayCount	RoomAvailableCount	RoomSoldCount	Occupancy %
9/1/2023	01-Sep-23	30	9000	2930	32.56%
10/1/2023	01-Oct-23	31	9300	3522	37.87%
11/1/2023	01-Nov-23	30	9000	3759	41.77%
12/1/2023	01-Dec-23	31	9300	3676	39.53%
1/1/2024	01-Jan-24	31	9300	3661	39.37%
2/1/2024	01-Feb-24	29	8700	3397	39.05%
3/1/2024	01-Mar-24	31	9300	3407	36.63%
4/1/2024	01-Apr-24	30	9000	3736	41.51%
5/1/2024	01-May-24	31	9300	3518	37.83%
6/1/2024	01-Jun-24	30	9000	3481	38.68%
7/1/2024	01-Jul-24	31	9300	3741	40.23%
8/1/2024	01-Aug-24	31	9300	3560	38.28%
9/1/2024	01-Sep-24	30	9000	3407	37.86%
10/1/2024	01-Oct-24	31	9300	3536	38.02%
11/1/2024	01-Nov-24	30	9000	3502	38.91%

2.4 Creating Booking_Details Table

1. Create a new Sheet named “Booking_Details”.
2. **Columns and Formulas:**
    - StayDate and Room Booked: Copy from Rooms Booked Table.
    - Month Year =TEXT(A2, "mmm yyyy")
    - Month Start =DATE(YEAR(A2), MONTH(A2), 1)

- Year =YEAR(A2)
- Month =MONTH(A2)
- Season
  =IF(OR(MONTH(A2)=12,MONTH(A2)<=2),"Winter",
  IF(MONTH(A2)<=5,"Spring",
  IF(MONTH(A2)<=8,"Summer","Autumn")))
- Weekday =TEXT(A2,"dddd")
- WeekNum =WEEKNUM(A2,1)
- WeekStart =A2-WEEKDAY(A2)+1
- YearWeek=YEAR(A1+3-WEEKDAY(A1,3)) & "-W" & TEXT(ISOWEEKNUM(A1), "00")

StayDate	RoomBooked	MonthYear	MonthStart	Year	Month	Season	Weekday	WeekNum	WeekStart	YearWeek
10/25/2023	110	10/25/2023	10/1/2023	2023	October	Autumn	Wednesday	43	10/23/2023	2023-W43
10/26/2023	116	10/26/2023	10/1/2023	2023	October	Autumn	Thursday	43	10/23/2023	2023-W43

5/31/2024	136	5/31/2024	5/1/2024	2024	May	Spring	Friday	22	5/27/2024	2024-W22

2.5 Creating TblRates Table

Create a new sheet named TblRates with a table containing RoomID and Price as columns

RoomTypeID	Price
RT1	2500
RT2	4000
RT3	6000
RT4	9000
RT5	7500
RT6	8000
RT7	1800
RT8	7000
RT9	12000
RT10	5000

2.6 Creating TblBookings Table

- Create a new sheet.
- Create a Table with Columns BookingID, CustomerID, BranchID, RoomID, CheckInDate, CheckOutDate, NightsStayed, StayDate from Booking_Details Table
- Go to Data →Get Data →Combine Queries → Merge.

BookingID	DateID	CustomerID	RoomTypeID	BranchID	CheckInDate	CheckOutDate	NightStayed	StayDate	Revenue
BK1000	D001	C2587	RT9	B14	10/25/2023	10/27/2023	2	45224	24000

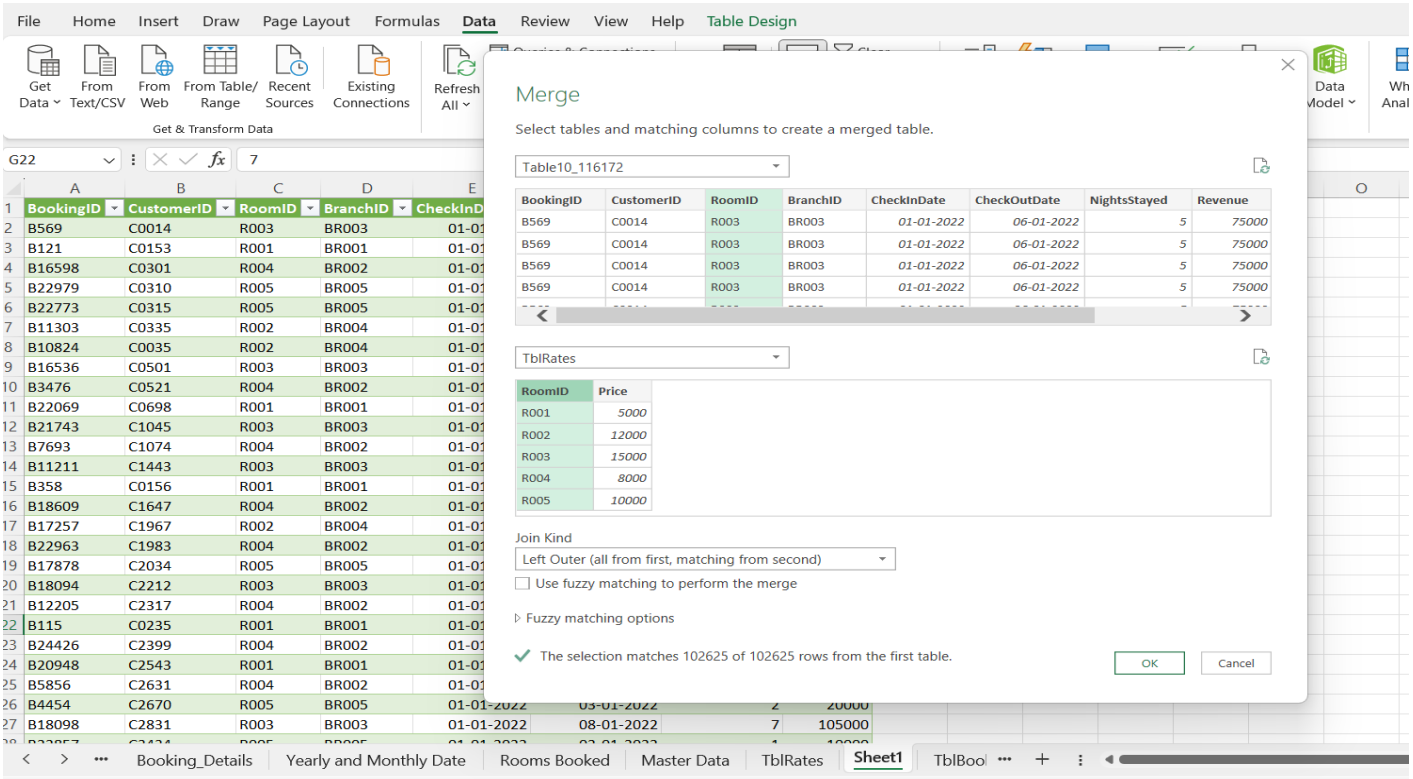
2.7 Creating "Tbl_Calculation" (Final KPI Table)

This is the consolidated table used for final calculations using the derived data.

1. **Create Sheet:** Name it **"Tbl_Calculation"**.
2. **Columns & Formulas:**
    - StayDate and Room Booked Count : Copy from Rooms Booked Table.
    - Total Revenue =SUMIFS(TblBookings!J:J, TblBookings!I:I, Tbl_Calculation!A2)
    - Total Rooms = 150
    - Occupancy % =B2/D2*100
    - ADR =C2/B2 (DataType : Currency -> English (India))
    - RevPAR =(F2 * E2)/100
    - Season
      =IF(OR(MONTH(A2)=12,MONTH(A2)<=2),"Winter",

IF(MONTH(A2)<=5,"Spring",
IF(MONTH(A2)<=8,"Summer","Autumn")))

- Weekday =TEXT(A2,"dddd")
- Week =WEEKNUM(A2)
- MonthStart =DATE(YEAR(A2), MONTH(A2), 1)



- Month =TEXT(A2,"MMMM")
- Quarter ="Q" & ROUNDUP(MONTH(A2)/3, 0)

StayDate	RoomBooked	Total Revenue	Total Rooms	Occupancy	ADR	REVPAR	Season	Weekday	Week	MonthStart	Month	Quarter
10/25/2023	110	24000	300	0.37	₹218.18	₹0.80	Autumn	Wednesday	43	10/1/2023	October	Q4

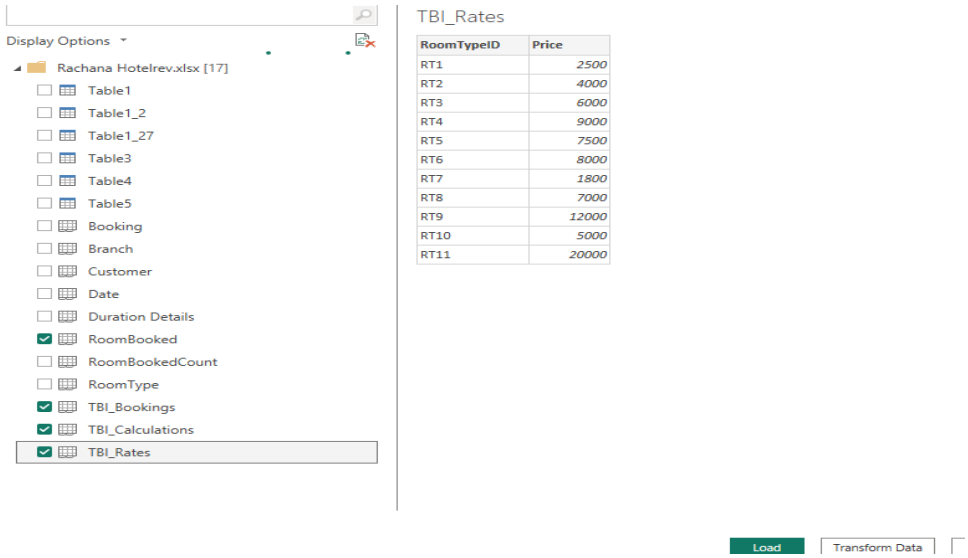
3. Power BI Data Modelling

3.1 importing Data to PowerBI

Open Power BI Desktop, go to Home → Get Data → Excel Workbook, select the Excel file, choose the required tables (Booking_Details, Rooms Booked, TBI_Rates, TBI_Bookings, TBI_Calculations) in the Navigator, and click Load to import them.



Enhancing Booking_Details (Calculated Columns)

1. Go to the Data View (Table icon on the left).
2. Select the Booking_Details table.
3. Click New Column
4. Formula:

   MonthStart = DATE(YEAR([StayDate]), MONTH([StayDate]), 1)

5. Create Columns in the same process for:

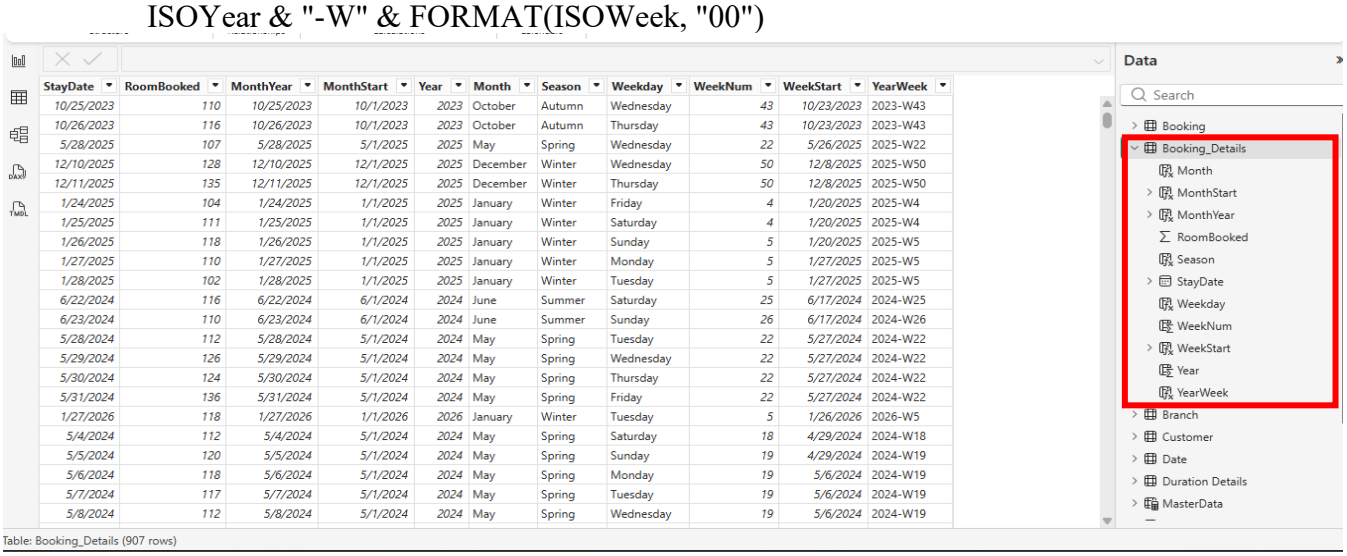
   - MonthYear = FORMAT([StayDate], "MMM YYYY")
   - Year = YEAR([StayDate])
   - Month = FORMAT([StayDate], "MMMM")

   - Season = SWITCH(TRUE(), MONTH([StayDate]) IN {12,1,2}, "Winter",
     MONTH([StayDate]) IN {3,4,5}, "Spring",
     MONTH([StayDate]) IN {6,7,8}, "Summer",
     MONTH([StayDate]) IN {9,10,11}, "Autumn")

   - Weekday = FORMAT([StayDate], "dddd")
   - WeekNum = WEEKNUM([StayDate].[Date])

   - WeekStart = [StayDate] - WEEKDAY([StayDate].[Date]) + 1

   - YearWeek = VAR SundayOfWeek = [StayDate] - WEEKDAY([StayDate], 1) VAR ISOYear = YEAR(SundayOfWeek) VAR ISOWeek = WEEKNUM(SundayOfWeek, 1) RETURN ISOYear & "-W" & FORMAT(ISOWeek, "00")



StayDate	RoomBooked	MonthYear	MonthStart	Year	Month	Season	Weekday	WeekNum	WeekStart	YearWeek
10/25/2023	110	10/25/2023	10/1/2023	2023	October	Autumn	Wednesday	43	10/23/2023	2023-W43

3.3 Creating the MasterData Table (DAX Calculated Table)

1. Go to the **Modeling** tab → click **New Table**.

2. **Paste this formula**:

```
MasterData =
VAR CalendarTable =
   ADDCOLUMNS (
      CALENDAR(DATE(2023,9,1), DATE(2026,2,18)),
      "MonthStart", EOMONTH([Date], -1) + 1,
      "Month", FORMAT(EOMONTH([Date], -1) + 1, "dd-mmm-yy"),
      "DayCount", DAY(EOMONTH([Date], 0)),
      "RoomAvailableCount", DAY(EOMONTH([Date], 0)) * 300
   )
RETURN
   ADDCOLUMNS (
      SUMMARIZE (
         CalendarTable,
         [MonthStart], [Month], [DayCount], [RoomAvailableCount]
      ),
      "RoomSoldCount",
         CALCULATE (
            SUM (Booking_Details[RoomBooked]),
            TREATAS ( { [MonthStart] }, Booking_Details[MonthStart] )
         ),
      "Occupancy %",
         DIVIDE (
            CALCULATE (
               SUM (Booking_Details[RoomBooked]),
               TREATAS ( { [MonthStart] }, Booking_Details[MonthStart] )
            ),
            [RoomAvailableCount],
            0
         )
   )
```

This will create column MonthStart,Month,Daycount,RoomAvailableCount,Roomsoldcount,Occupancy.

MonthStart	Month	DayCount	RoomAvailableCount	RoomSoldCount	Occupancy %	TotalRevenue	ADR	RevPAR
01-09-2023	01-Sep-23	30	7320	2389	33%	₹1,06,16,000	₹4,444	₹15
01-10-2023	01-Oct-23	31	7564	2819	37%	₹1,15,96,000	₹4,114	₹15

01-02-2025	01-Feb-25	28	6832	2468	36%	₹1,03,56,000	₹4,196	₹15
01-03-2025	01-Mar-25	31	7564	2701	36%	₹1,12,82,000	₹4,177	₹15
01-04-2025	01-Apr-25	30	7320	2871	39%	₹1,17,09,000	₹4,078	₹16
01-05-2025	01-May-25	31	7564	2726	36%	₹1,09,39,500	₹4,013	₹14
01-06-2025	01-Jun-25	30	7320	2576	35%	₹1,10,71,000	₹4,298	₹15
01-07-2025	01-Jul-25	31	7564	2929	39%	₹1,20,43,000	₹4,112	₹16
01-08-2025	01-Aug-25	31	7564	2856	38%	₹1,21,43,000	₹4,252	₹16
01-09-2025	01-Sep-25	30	7320	2748	38%	₹1,13,21,500	₹4,120	₹15

3. Create new columns like TotalRevenue,ADR,REVPAR in master Data Table

Formula:

→ **TotalRevenue** = CALCULATE(
SUM(Bookings[Revenue]),
FILTER(Bookings, Bookings[MonthStart] = MasterData[MonthStart])
)

TotalRevenue:
Calculates the **total revenue generated from bookings** for a specific month by summing the Revenue column based on the matching MonthStart.

→ **ADR** = DIVIDE(

[TotalRevenue],
MasterData[RoomSoldCount]
)

ADR (Average Daily Rate):
Measures the **average revenue earned per sold room**, calculated by dividing TotalRevenue by the number of rooms sold.

→ **RevPAR** = [ADR] * DIVIDE(MasterData[Occupancy %], 100)

RevPAR (Revenue Per Available Room):
Indicates the **revenue generated per available room**, calculated by multiplying ADR with the occupancy rate.

4. Click on New Measure and create the following measures:
   DAX MEASURES:

   - **MADR** =

     ```
     DIVIDE(
        SUM(Booking[Revenue]),
        SUM(Booking[RoomNightSold]))
     ```

   - **MRevPAR** =

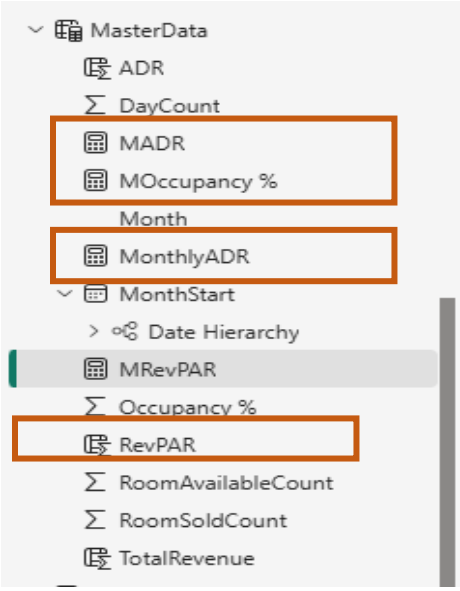
     ```
     DIVIDE(
        SUM(Booking[Revenue]),
        SUM(MasterData[RoomAvailableCount]))
     ```

   - **MOccupancy %** =

     ```
     DIVIDE(
        SUM(Booking[RoomNightSold]),
        SUM(MasterData[RoomAvailableCount]),
        0
     ) * 100
     ```

   - **MonthlyADR** =

     ```
     MonthlyADR =
     CALCULATE(
     DIVIDE(SUM(Booking[Revenue]), SUM(MasterData[RoomSoldCount])),
     ALLEXCEPT(MasterData, MasterData[MonthStart])
     )
     ```



3.4 Enhancing Tbl_Calculation table

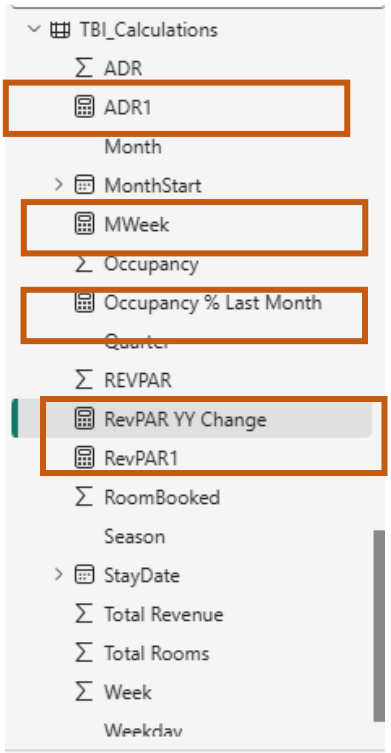
1. Go to the Modeling tab → click New Measure.
2. Create the following measures:

```
ADR YY Change =
    DIVIDE(
        [ADR] - CALCULATE([ADR], SAMEPERIODLASTYEAR('TBI_Calculations'[StayDate])),
        CALCULATE([ADR], SAMEPERIODLASTYEAR('TBI_Calculations'[ [StayDate].[Date]))
    )

MWeek = WEEKNUM(SELECTEDVALUE(TBI_Calculations[StayDate]), 2)

    Occupancy % Last Month = CALCULATE([MOccupancy %],
    PREVIOUSMONTH(TBI_Calculations[ [StayDate]))

    RevPAR YY Change =
    DIVIDE(
        [RevPAR] - CALCULATE([RevPAR], SAMEPERIODLASTYEAR(TBI_Calculations[StayDate])),
        CALCULATE([RevPAR], SAMEPERIODLASTYEAR(TBI_Calculations[StayDate]))
    )
```



3.5 Creation of Monthly Bookings Table

1. Go to the Modeling tab → click New Table.
2. Formula:

```
MonthlyBookings =
SUMMARIZE (
    Booking_Details,
    Booking_Details[MonthStart],
    "TotalRoomsBooked", SUM(Booking_Details[Room Booked])
)
```

```
MonthlyBookings =
SUMMARIZE (
    Booking_Details,
    Booking_Details[MonthStart],
    "TotalRoomsBooked", SUM(Booking_Details[Room Booked])
)
```

MonthStart	TotalRoomsBooked
01-12-2025	2872
01-06-2025	2576
01-11-2025	2714
01-08-2025	2856
01-07-2024	2747
01-09-2025	2748
01-04-2025	2871
01-03-2024	2673
01-08-2024	2747
01-09-2024	2719
01-07-2025	2929
01-10-2023	2819
01-05-2024	2559

4. PowerBI Visuals:

Visual 1: Summary Table

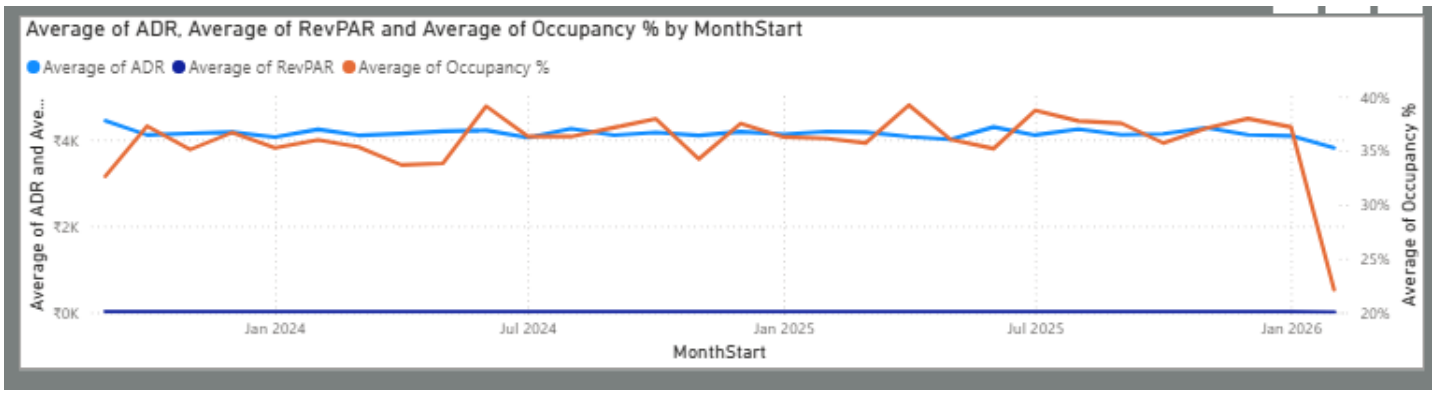
1. Select Visual: Click the Table icon.
2. Add Columns: Drag the following fields in this order:
    - MonthStart
    - RoomAvailableCount (Set to Sum)
    - RoomSoldCount (Set to Sum)
    - TotalRevenue (Set to Sum)
    - ADR (Set to Average)
    - Occupancy % (Set to Average)
    - RevPAR (Set to Average)

MonthStart	Sum of RoomAvailableCount	Sum of RoomSoldCount	Sum of TotalRevenue	Sum of RevPAR	Sum of ADR	Sum of Occupancy %
01-09-2023	7320	2389	₹1,06,16,000	₹15	₹4,444	33%
01-10-2023	7564	2819	₹1,15,96,000	₹15	₹4,114	37%
01-11-2023	7320	2570	₹1,06,75,000	₹15	₹4,154	35%
01-12-2023	7564	2774	₹1,15,95,500	₹15	₹4,180	37%
01-01-2024	7564	2668	₹1,08,51,000	₹14	₹4,067	35%
01-02-2024	7076	2548	₹1,08,15,500	₹15	₹4,245	36%
01-03-2024	7564	2673	₹1,09,71,000	₹15	₹4,104	35%
01-04-2024	7320	2465	₹1,02,24,000	₹14	₹4,148	34%
01-05-2024	7564	2559	₹1,07,50,500	₹14	₹4,201	34%
Total	**222528**	**79985**	**₹33,24,61,500**	**₹448**	**₹1,24,595**	**1077%**

Visual 2: Line Chart

1. Select Visual: Click the Line Chart icon.
2. X-Axis: Drag MonthStart from the MasterData table.
3. Y-Axis: Drag the following three fields:
    - ADR (Set to Average)
    - Occupancy % (Set to Average)

Secondary Y-Axis: RevPAR (Set to Average)

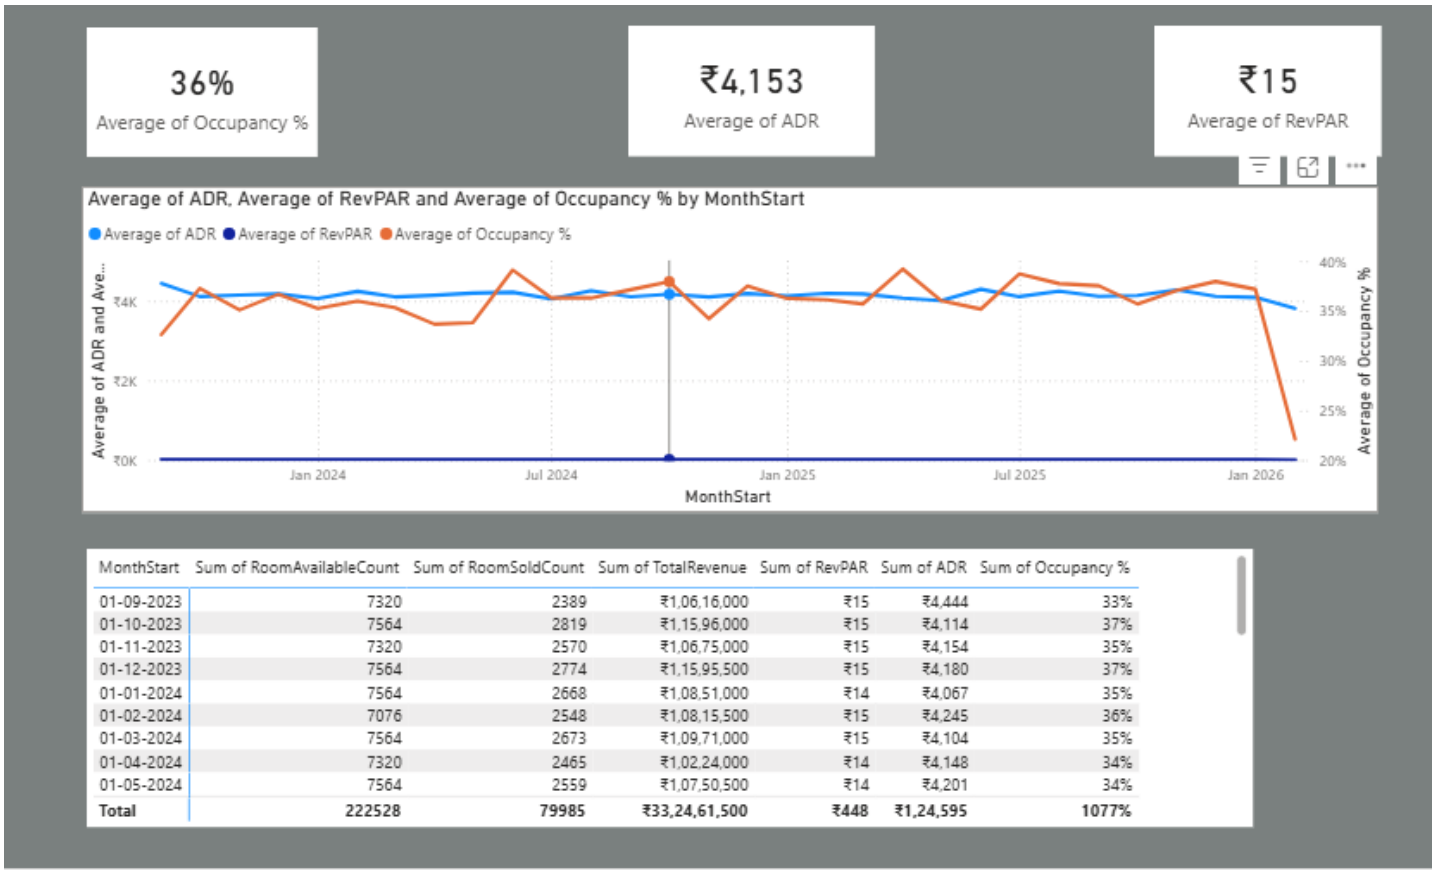


Visual 3: KPI Cards

1. Select Visual: Click the Card visual icon (looks like 123).
2. Card 1 (ADR):
    - Drag ADR from Tbl_Calculation (or your Measure table) to Fields.
    - Ensure aggregation is set to Average (Click dropdown arrow > Average).
    - Format: General > Title > "Average of ADR". Callout Value > Display units > Auto (shows ₹10.00K).
3. Card 2 (RevPAR):
    - Copy/Paste Card 1.

- Replace field with RevPAR. Set aggregation to Average.

4. Card 3 (Occupancy):
    - Copy/Paste Card 1.
    - Replace field with Occupancy %. Set aggregation to Average.



MonthStart	Sum of RoomAvailableCount	Sum of RoomSoldCount	Sum of TotalRevenue	Sum of RevPAR	Sum of ADR	Sum of Occupancy %
01-09-2023	7320	2389	₹1,06,16,000	₹15	₹4,444	33%
01-10-2023	7564	2819	₹1,15,96,000	₹15	₹4,114	37%
01-11-2023	7320	2570	₹1,06,75,000	₹15	₹4,154	35%
01-12-2023	7564	2774	₹1,15,95,500	₹15	₹4,180	37%
01-01-2024	7564	2668	₹1,08,51,000	₹14	₹4,067	35%

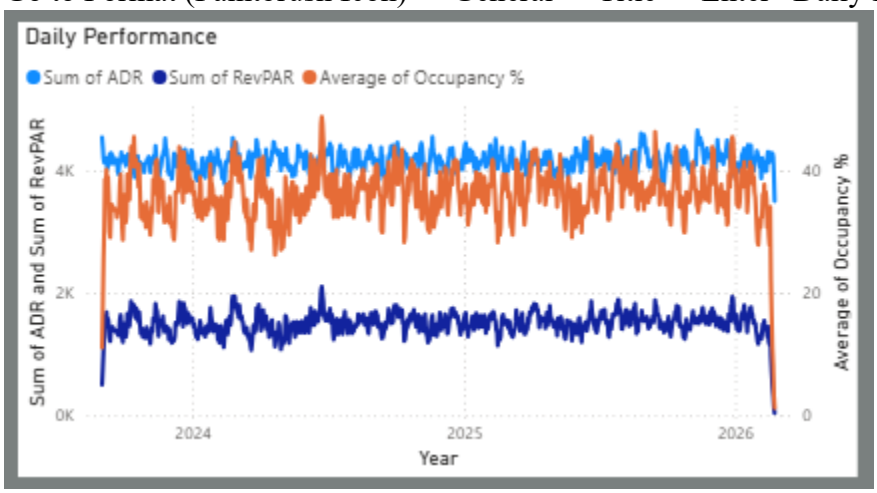
01-04-2024	7320	2465	₹1,02,24,000	₹14	₹4,148	34%
01-05-2024	7564	2559	₹1,07,50,500	₹14	₹4,201	34%
Total	**222528**	**79985**	**₹33,24,61,500**	**₹448**	**₹1,24,595**	**1077%**

Visual 4: Daily Performance

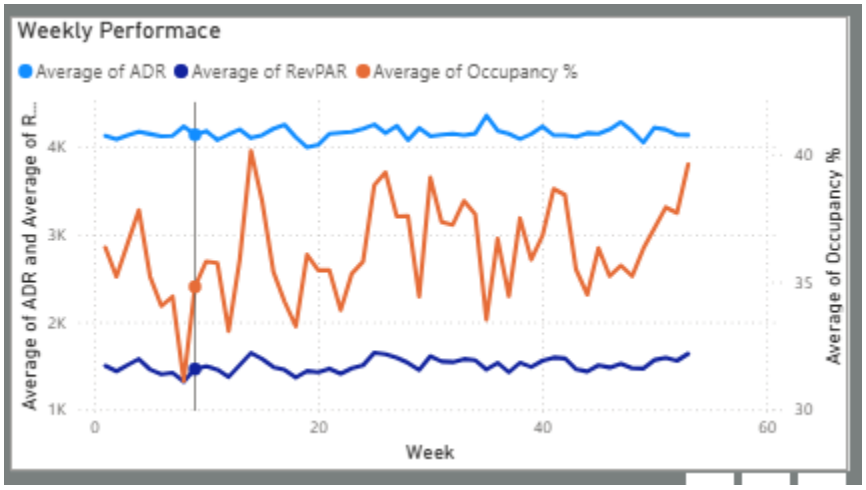
1. Select Visual: Click the Line Chart icon.
2. X-Axis: Drag Year from MasterData.
3. Y-Axis (Left Scale):
    - Drag ADR (Set to Sum)
    - Drag RevPAR (Set to Sum).
4. Secondary Y-Axis (Right Scale):
    - Drag Occupancy % (Set to Average).

5. Go to Format (Paintbrush Icon) -> General -> Title -> Enter “Daily Performance”



Visual 5: Weekly Performance

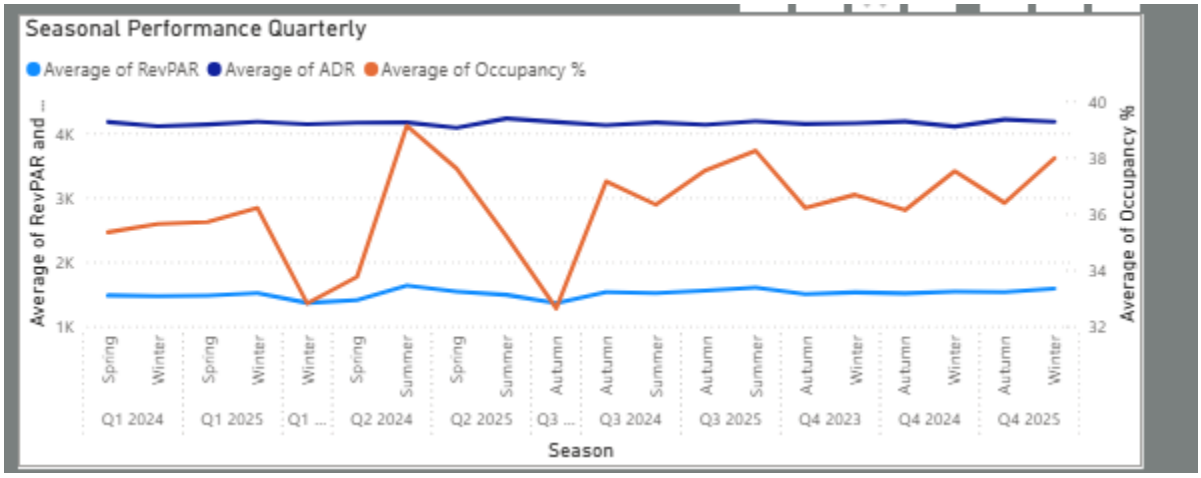
1. Select Visual: Click the Line Chart icon.
2. X-Axis: Drag Week from MasterData.
3. Y-Axis: Drag ADR (Average) and RevPAR (Sum).
4. Secondary Y-Axis: Drag Occupancy % (Average).



Visual 6: Seasonal Performance

1. Select Visual: Click the Line Chart icon.
2. X-Axis: Create a hierarchy or drag fields in this order:
    - StayDate (Year, Quarter from Tbl_Calculation)
    - Season (from Tbl_Calculation)
3. Y-Axis: Drag ADR and RevPAR (Averages from MasterData).

4. Secondary Y-Axis: Drag Occupancy % from MasterData (Average).

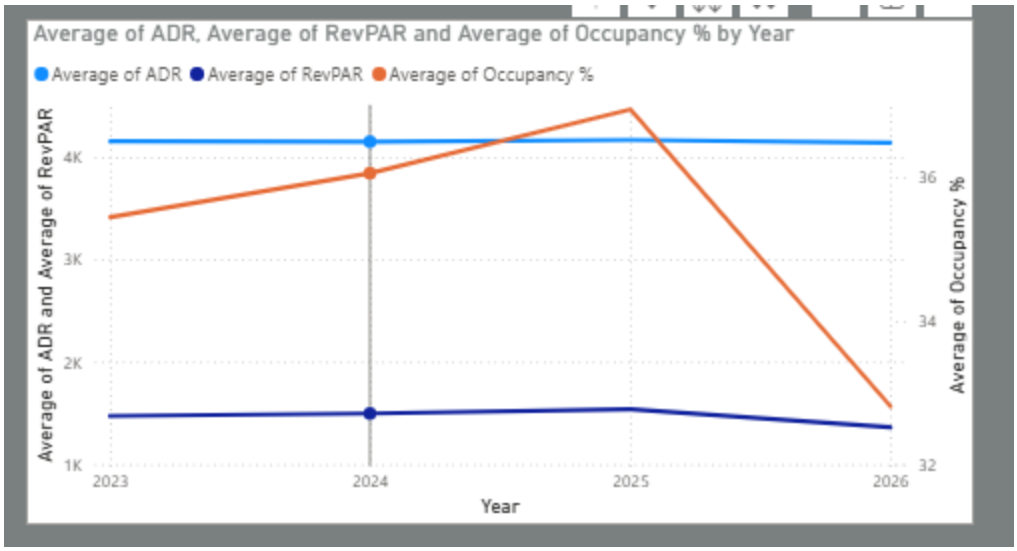


Visual 7: Table

1. Select Visual: Click the Table icon
2. Rows (The Hierarchy): Drag field into the "Rows"
    - MonthStart from MasterData (Year, Quarter, Month, Day)
3. Values: Drag the metrics you want to measure:
    - ADR (Select Average)
    - Occupancy % (Select Average)
    - RevPAR (Select Average)
4. Formatting:
    - Go to Specific Column formatting to apply Currency (₹) to ADR/RevPAR.

Visual 8: Line Chart

1. **Select Visual:** Line Chart.
2. **X-Axis:** MonthStart from MasterData (with Year, Quarter, Month, Day).
3. **Y-Axis:** ADR (Avg), RevPAR (Avg), Occupancy % (Avg) from MasterData.



5. Insights – Key Performance Indicator (KPI) Analysis

Based on the aggregated data in KPI cards and summary tables:

- **Premium Market Positioning (ADR):**
  The Average Daily Rate (ADR) is about **₹9,996.68 (~₹10,000)**. This indicates the hotel operates in the **premium/luxury segment** with high pricing per room.
- **Operational Efficiency (Occupancy %):**
  The average **occupancy rate is 62%**, meaning **around 38% of rooms remain unsold** on average.
- **Revenue Reality (RevPAR):**
  The **RevPAR is ₹6,232**, which is lower than the ADR. This shows a **gap between potential revenue and actual earnings**, mainly due to vacant rooms.

6. Conclusion

The analysis shows that the hotel chain has **strong pricing power (high ADR)** but **moderate demand (62% occupancy)**. Improving occupancy could help reduce revenue loss and increase overall profitability.
